

The green side of Eloma

Eloma is committed to protecting the environment. Environmental considerations are an integral part of our business practices. From the earliest stages of product design through manufacturing and we take care to keep our activities and our products environmentally friendly.

Our guiding principle is to develop products that will save water, energy and work more efficiently.

How we save the environment and the worlds resources.

- The Patented Live-Steam-System significantly reduces energy compared to a boiler system. With no need to preheat and standby it saves up to 46%.
- The Award Winning Multi-Eco-System saves up to 42% water and up to 16% energy, due to its high-performance heat exchanger with condensation
- The Unique Multi-Eco-Condensation-Hood uses no water for cooling and has a minimum energy use of only 90 Watt on average.
- The Low Pollution Gas Burner with its Patented High Performance Triple Pipe Heat Exchanger greatly reduces gas emissions and pollutants into the environment.
- The Patented Eloma Steam-Protection-System extracts steam from the chamber guaranteeing a better working environment while reducing cooling costs.
- The Patented Eloma autoclean delivers a precise dosage of liquid cleaner and rinse aid, eliminating unnecessary waste. The system is fully automated preventing human contact with the cleaning agent.
- Our recommended cleaners are readily bio-degradable.
- Our office supplies and packaging materials are mostly made from recycled materials.
